

Bethune Energy commits \$1.8 million in future funding for the Community Medical Clinic

The donation will help support the medical care nonprofit in its mission of making healthcare accessible and affordable to Kershaw County residents.

Bethune Energy, the natural gas plant planned for Kershaw County, today announced the donation of \$1.8 million over the next 20 years to the Community Medical Clinic of Kershaw County, furthering the nonprofit's mission to provide accessible, quality care to uninsured residents of Bethune and Kershaw County.

The Community Medical Clinic (CMC) Board of Directors approved a partnership with Bethune Energy that will support expanded healthcare services in the Bethune Community. CMC already has a presence in the Bethune community, where they currently provide chronic disease education, medical supplies, medical equipment and connections to essential community resources.

The donation will enable CMC to expand its services by offering free medical care to uninsured individuals closer to where they live. By bringing care into the community, CMC will help reduce barriers to healthcare, improve access to essential medical services, and ensure that more of our neighbors receive the compassionate, high-quality care they deserve. In 2025, CMC recorded more than 3,200 patient encounters across Kershaw County, delivered a value of \$2.4 million in direct medical services, and provided 11,313 medications at no cost to patients.

"As we establish our roots here, we believe our responsibility goes far beyond producing power. We want to empower the people who make this community feel like home to keep doing that work," said Dylan Casey, Vice President of Development for Beaufort Rosemary. "The Community Medical Clinic provides critical care where people need it most, and we are honored to support their vital work."

Through partnerships with local nonprofits and charitable organizations, Bethune Energy will contribute to the community and improve life for its residents.

"Every decision we make is guided by one question: Will it help us care for more people in Kershaw County who otherwise might go without healthcare?" said Charlotte Rankin, CEO of the Community Medical Clinic of Kershaw County. "This commitment will allow us to expand access to free medical care in the Bethune community, bringing services closer to where patients live and helping remove barriers to care. We are grateful for this investment in the health and wellbeing for our community."

CMC will begin receiving annual donations once the plant becomes operational. Bethune Energy anticipates construction will begin in 2028/29 and operations to start by 2031. More information about the project can be found at bethuneenergy.com.

About Bethune Energy

Bethune Energy is a proposed natural gas fueled electricity generating facility near the town of Bethune in Kershaw County, South Carolina. The project represents a roughly \$900 million investment and 500 megawatts of reliable, resilient, and affordable energy that will contribute to an energy system designed for South Carolina's future. It is being developed by Beaufort Rosemary, a greenfield energy project developer with over 30 years experience focusing on natural gas, geothermal, wind and large utility scale solar, and storage projects.
